PROFESSIONAL SUMMARY

Applied AI Engineer and Python Backend Developer with hands-on experience building production-oriented AI applications, intelligent automation systems, and LLM-powered workflows. Experienced with Python, FastAPI, Gemini API, SQLite, REST APIs, and UiPath to build end-to-end AI solutions including document intelligence, AI assistants, analytics dashboards, and workflow automation. Seeking Applied AI Engineer, Software Engineer, or Backend AI roles.

TECHNICAL SKILLS

AI & LLM: Gemini API · GPT · Prompt Engineering · AI Assistants · RAG (Foundational) · Embeddings · Intelligent Automation
Programming & Backend: Python · FastAPI · REST APIs · SQLite · Supabase · HTTP Requests · JSON
Automation: UiPath Studio · REFramework · Orchestrator · Email · Excel · PDF · Web Automation
Developer Tools: Git · GitHub · VS Code · IMAP · SMTP · Outlook Automation
Core: Software Engineering · System Design · API Integration · Exception Handling · Analytical Thinking

PROFESSIONAL EXPERIENCE

Senior SME / Sr. Representative – Operations | Concentrix

Oct 2023 – Present

- Identified and automated 5+ manual workflow bottlenecks using Python and UiPath, significantly reducing team processing overhead and boosting efficiency across operations.
- Managed critical customer operations and high-priority technical escalations while consistently exceeding strict SLA benchmarks.
- Streamlined legacy operational processes through targeted automation-driven improvements and spearheaded performance reporting.
- Mentored and onboarded incoming team members on internal tools, automation workflows, and optimization strategies.

PROJECTS

Intelligent BOQ Pricing & Estimation System | Python · Gemini API · FastAPI · Excel/PDF Automation |

[GitHub](#) 

- Engineered a standalone system that automates ingestion of construction/tender Bill of Quantities (BOQ) files directly from email attachments — reducing processing time by ~98% (4hrs → 4-5 minutes).
- Built a data pipeline to extract, parse, and normalize chaotic tabular data from PDF and Excel files into structured JSON using **pdfplumber**, **openpyxl**, and custom parsers.
- Integrated **Google Gemini API** for intelligent item description normalization and context-aware schema mapping.
- Designed a dynamic fallback pricing engine that queries a historical database and triggers live market lookups for unmatched line items.
- Automated report generation, commercial BOQ compilation, and instant email delivery with archival storage via SMTP.
- Added an AI Assistant enabling natural-language interaction with uploaded BOQs for pricing insights and procurement queries.
- Implemented analytics dashboards with pricing summaries, confidence metrics, and cost breakdowns for faster decision-making.
- Developed BOQ comparison capabilities to identify pricing differences across quotations and support vendor evaluation.
- Migrated from local Ollama inference to Gemini API after validation for improved performance while maintaining a production-oriented architecture.

AI Email Classification & Auto-Response System | UiPath · FastAPI · Python · LLM | [GitHub](#)

- Developed an end-to-end intelligent email processing ecosystem integrating enterprise UiPath robots with a custom FastAPI backend — handling 500+ emails/month with zero manual sorting.

- Implemented real-time LLM-based email intent classification and context-aware auto-response generation; supports both cloud LLMs and local models via **Ollama** for privacy-sensitive deployments.
- Constructed robust IMAP/SMTP workflows with strict JSON schema validation, detailed retry logic, and fallback exception handling for 24/7 unattended operation.

Automated AI Birthday Email Generator | Python · UiPath · GPT

- Created a scheduled script connecting custom database lookups with generative AI to craft deeply personalized, context-aware birthday greetings and deliver them fully hands-free.

Invoice Processing Automation Bot | UiPath

- Deployed an automated robotic workflow handling multi-format invoice extraction, categorization, coupon generation, and standardized Excel reporting with strict data validation gates.

Web Portal Data Extraction Bot | UiPath

- Built a resilient web scraper to pull dynamic product pricing, structured customer reviews, and complex seller ratings across web interfaces using dynamic selectors and robust error handling.

HACKATHON

ProcureMind AI – AMD Developer Hackathon 2026 | React · FastAPI · Gemini API

- Built an enterprise AI procurement assistant featuring AI chat, quotation generation, analytics, vendor comparison, and document intelligence. (Hackathon participation; results pending)

CERTIFICATIONS

AI Generalist Certification of Mastery | be10x AI Career Accelerator Program (Issued: May 2026) Core Expertise: AI Product Building, AI Agents & Autonomous Systems, and Data Analytics.

AI Agents Live Masterclass Certificate | Kayala's Tech Academy (Issued: May 2026)

Focused on engineering autonomous AI agents; conducted under guidance of a Senior Software Developer from Microsoft.

Prompt and Context Engineering – Level 2 | Concentrix University (Issued: May 2026)

Prompt and Context Engineering – Level 1 | Concentrix University (Issued: May 2026)

Introduction to Agentic Automation | UiPath

Introduction to Automation | UiPath

EDUCATION

Bachelor of Computer Applications (BCA)

Maharishi Dayanand University, Rohtak
